Praktikum 5

A. Setup Layout Global & Instalasi Bootstrap

Langkah pertama adalah melakukan import Bootstrap CSS dan Bootstrap Icons pada file `src/app/layout.jsx` agar sistem grid dan komponen UI dapat digunakan secara global di seluruh komponen halaman.

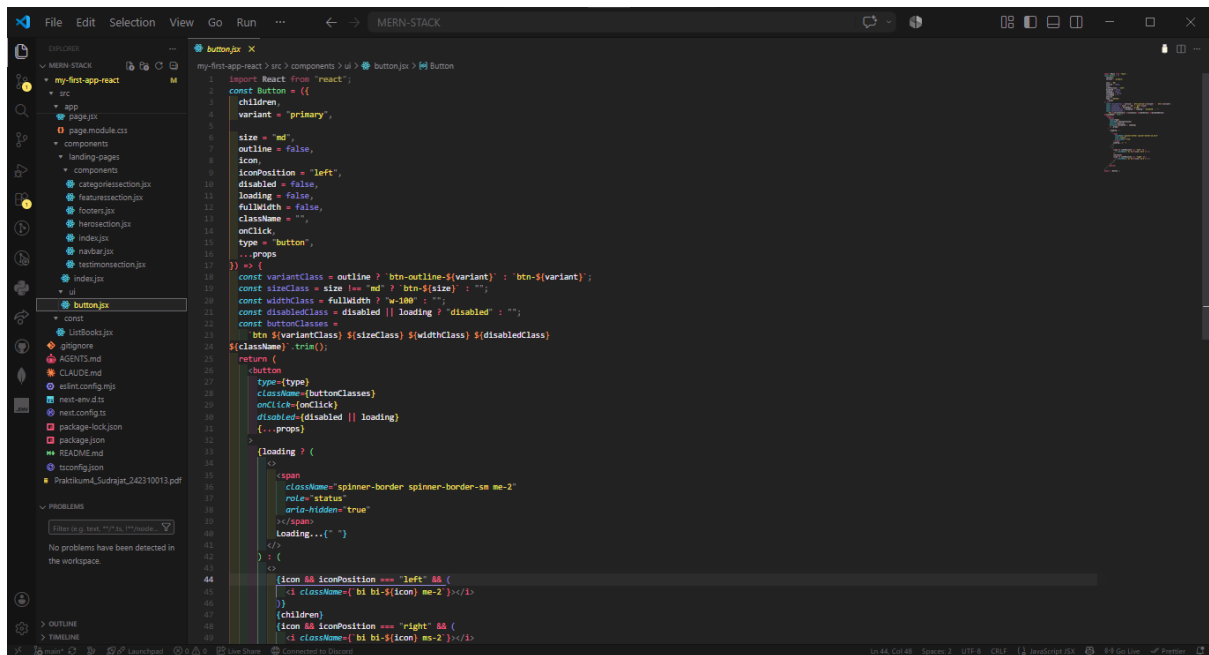

```
1 import type { Metadata } from "next";
2 import { Geist, Geist_Mono } from "next/font/google";
3 import "../globals.css";
4 import "bootstrap/dist/css/bootstrap.min.css";
5 import "bootstrap-icons/font/bootstrap-icons.css";
6
7 const geistSans = Geist({
8   variable: "--font-geist-sans",
9   subsets: ["latin"],
10 });
11
12 const geistMono = Geist_Mono({
13   variable: "--font-geist-mono",
14   subsets: ["latin"],
15 });
16
17 export const metadata: Metadata = {
18   title: "Create Next App",
19   description: "Generated by create next app",
20 };
21
22 export default function RootLayout({
23   children,
24 }: Readonly<
25   {
26     children: React.ReactNode;
27   } >) {
28   return (
29     <html lang="en" className={`${geistSans.variable} ${geistMono.variable}`} >
30       <body>{children}</body>
31     </html>
32   );
33 }
```

B. Pembuatan Komponen Reusable (Navbar & Button)

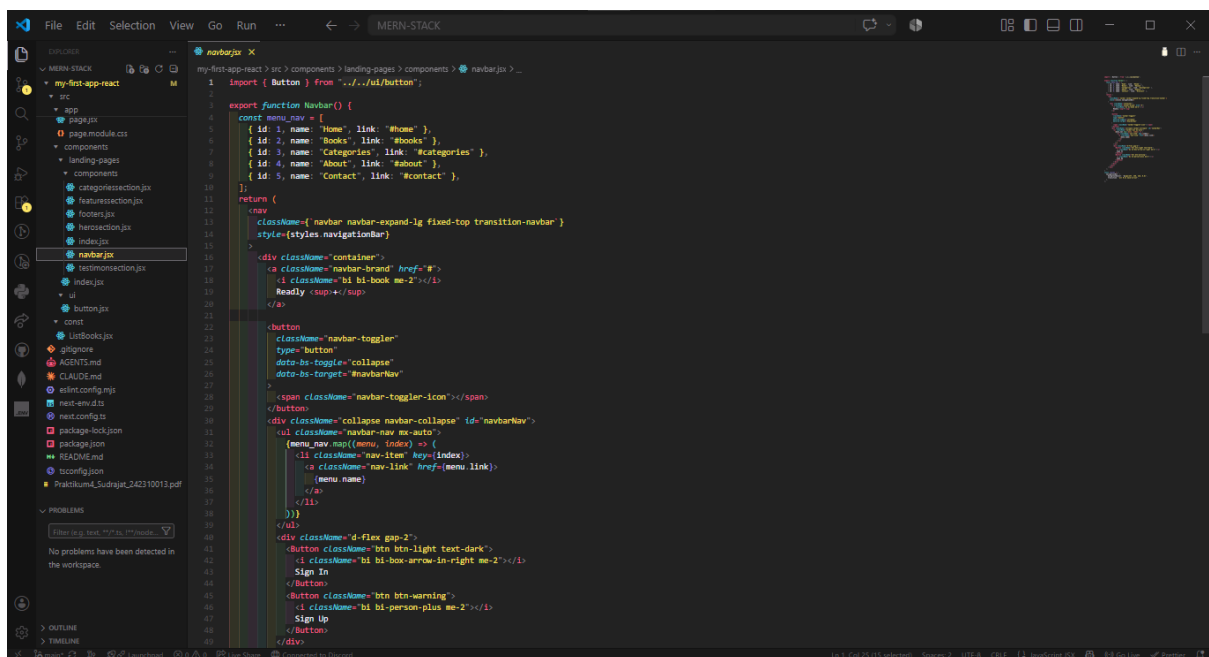

Membuat komponen tombol kustom di `ui/buttons.jsx` dan navigasi yang responsif menggunakan class navbar dari Bootstrap di dalam file `components/landing-pages/components/navbar.jsx`.

Button

```
1 import React from 'react';
2 const Button = ({
3   children,
4   variant = 'primary',
5   size = 'md',
6   outline = false,
7   icon,
8   iconPosition = 'left',
9   disabled = false,
10  loading = false,
11  fullWidth = false,
12  className = '',
13  onClick,
14  type = 'button',
15  ...props
16 }) => {
17   const variantClass = outline ? 'btn-outline-${variant}' : 'btn-${variant}';
18   const sizeClass = size.toLowerCase().replace(' ', '-') ? 'btn-${size}' : '';
19   const widthClass = fullWidth ? 'w-100' : '';
20   const disabledClass = disabled ? 'disabled' : '';
21   const buttonClasses = `
22     ${variantClass} ${sizeClass} ${widthClass} ${disabledClass}
23   `;
24   return (
25     <button
26       type={type}
27       className={buttonClasses}
28       onClick={onClick}
29       disabled={disabled || loading}
30       {...props}
31     >
32       {loading ? (
33         <span
34           className="spinner-border spinner-border-sm me-2"
35           role="status"
36           aria-hidden="true"
37         />
38       ) : (
39         <span
40           className={iconPosition === 'left' ? `bi-${icon} me-2` : `bi-${icon} ms-2`}
41           />
42       )}
43       {children}
44     </button>
45   );
46 }
```

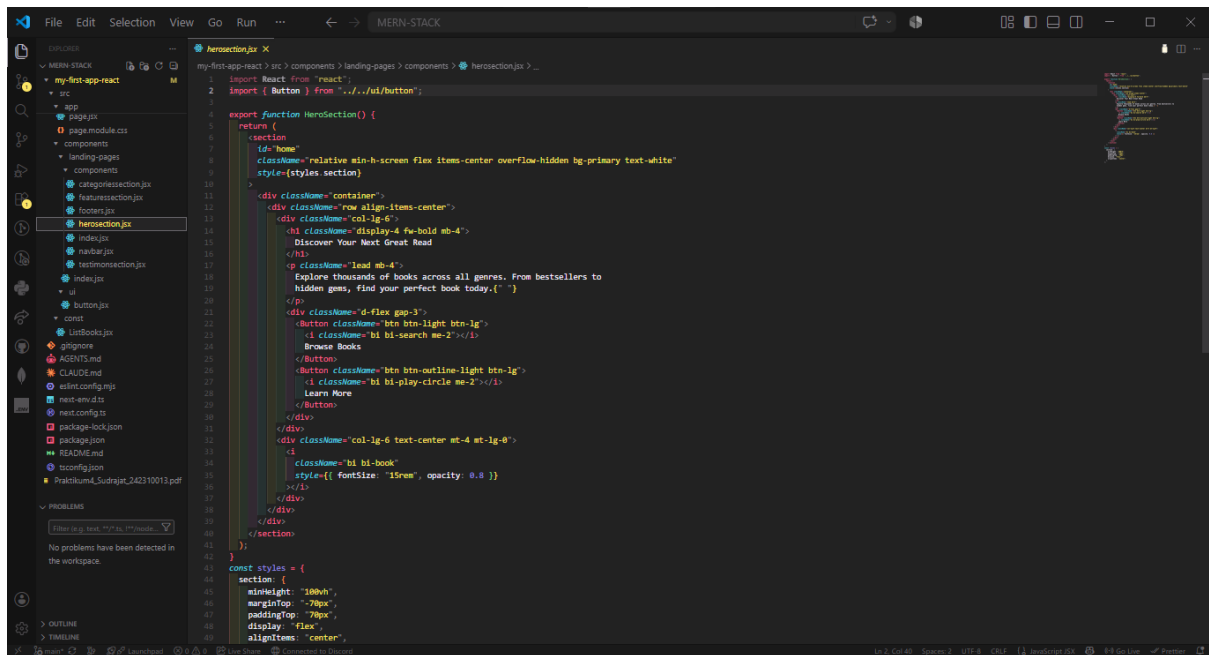

Navbar

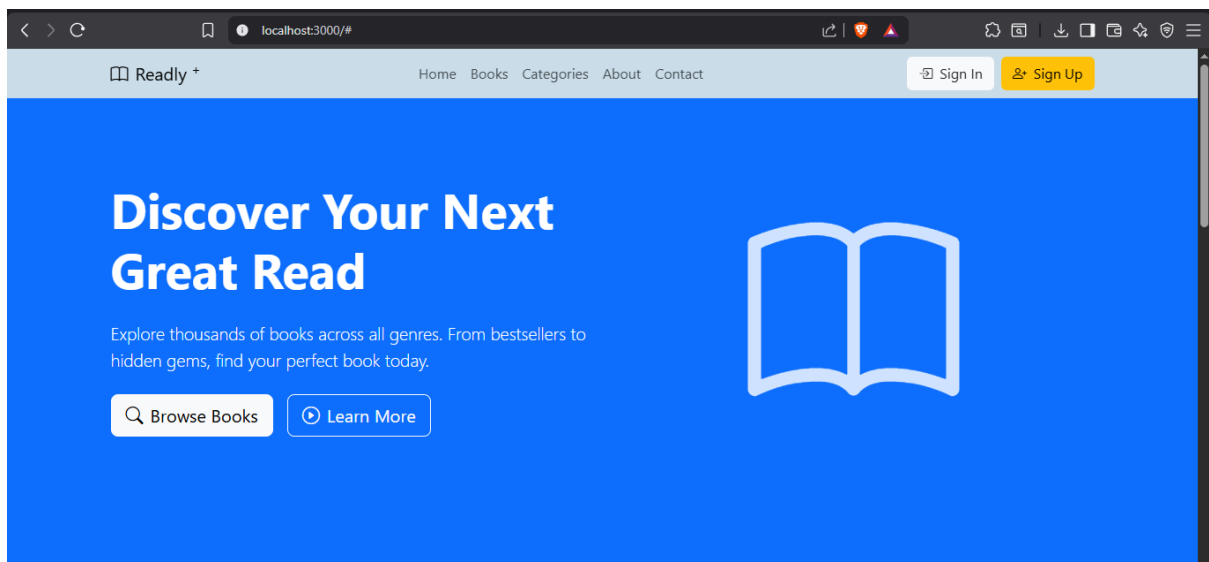

```
1 import { Button } from './ui/button';
2
3 export function Navbar() {
4   const menu_nav = [
5     { id: 1, name: 'Home', link: '#home' },
6     { id: 2, name: 'Books', link: '#books' },
7     { id: 3, name: 'Categories', link: '#categories' },
8     { id: 4, name: 'About', link: '#about' },
9     { id: 5, name: 'Contact', link: '#contact' },
10  ];
11  return (
12    <nav
13      className="navbar navbar-expand-lg fixed-top transition-navbar"
14      style={styles.navigationBar}
15    >
16      <div className="container">
17        <a
18          className="navbar-brand"
19          href="#"
20        >
21          Ready <sup>+</sup>
22        </a>
23
24        <button
25          className="navbar-toggler"
26          type="button"
27          data-bs-toggle="collapse"
28          data-bs-target="#navbarNav"
29        >
30          <span className="navbar-toggler-icon" />
31        </button>
32
33        <div className="collapse navbar-collapse" id="navbarNav">
34          <ul
35            className="navbar-nav ms-auto"
36          >
37            {menu_nav.map((menu, index) => (
38              <li
39                className="nav-item"
40                key={index}
41              >
42                <a
43                  className="nav-link"
44                  href={menu.link}
45                >
46                  {menu.name}
47                </a>
48              </li>
49            ))}
50          </ul>
51
52          <div className="d-flex gap-2">
53            <button
54              className="btn btn-light text-dark"
55              type="button"
56            >
57              Sign In
58            </button>
59
60            <button
61              className="btn btn-warning"
62              type="button"
63            >
64              Sign Up
65            </button>
66          </div>
67        </div>
68      </div>
69    </nav>
70  );
71 }
```

C. Pembuatan Hero Section

Merancang bagian atas landing page (Hero) yang menampilkan pesan utama dan Call-to-Action (herosection.jsx).

```
1 import React from 'react';
2 import { Button } from '../ui/button';
3
4 export function HeroSection() {
5   return (
6     <section
7       id="home"
8       className="relative min-h-screen flex items-center overflow-hidden bg-primary text-white"
9       style={styles.section}>
10      <div className="container">
11        <div className="row align-items-center">
12          <div className="col-lg-6">
13            <h1 className="display-4 fw-bold mb-4">
14              Discover Your Next Great Read
15            </h1>
16            <p className="lead mb-4">
17              Explore thousands of books across all genres. From bestsellers to
18              hidden gems, find your perfect book today.{" "}
19            </p>
20            <div className="d-flex gap-3">
21              <button className="btn btn-light btn-lg">
22                <i className="bi bi-search me-2"/> Browse Books
23              </button>
24              <button className="btn btn-outline-light btn-lg">
25                <i className="bi bi-play-circle me-2"/> Learn More
26              </button>
27            </div>
28          <div className="col-lg-6 text-center mt-4 mt-lg-0">
29            <i
30              className="bi bi-book"
31              style={{ fontSize: '15rem', opacity: 0.8 }}
32            >
33          </i>
34        </div>
35      </div>
36    </section>
37  );
38}
39
40 const styles = {
41   section: {
42     minHeight: '100vh',
43     margin: '0',
44     padding: '0 70px',
45     display: 'flex',
46     alignItems: 'center',
47   },
48 }
```

D. Pembuatan & Modifikasi Features Section (Dinamis dengan URL Gambar)

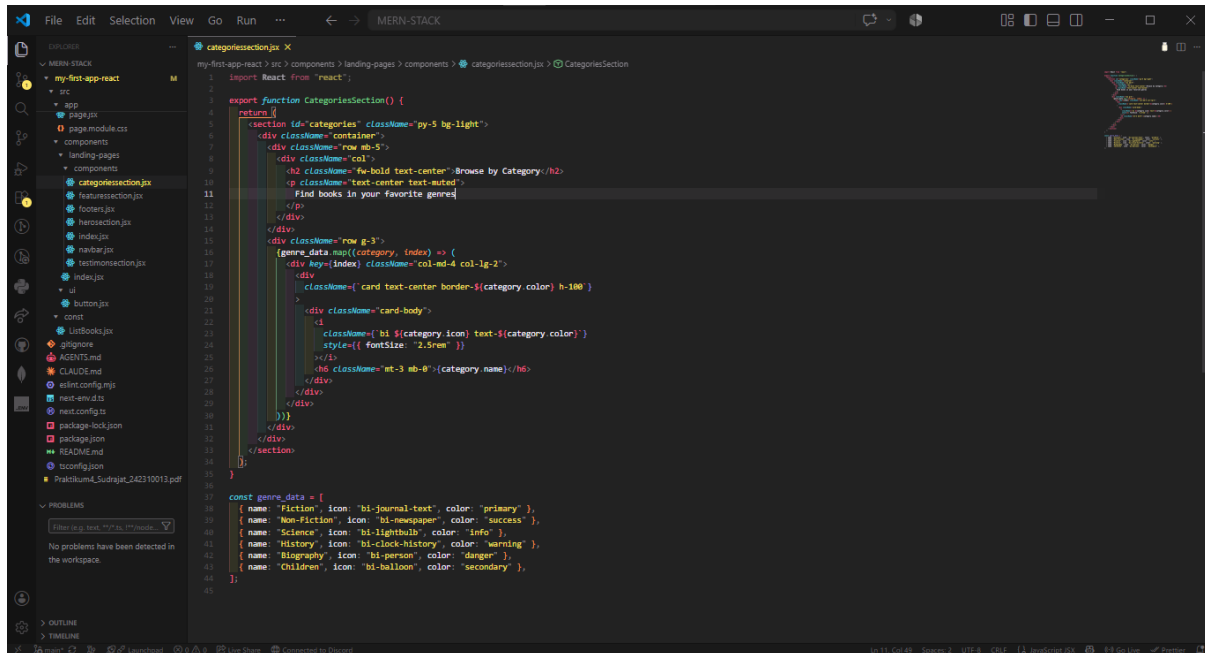

Membuat section Featured Books dengan melakukan pemetaan (mapping) data dari file `const/ListBooks.jsx`.

Modifikasi Khusus: Komponen BookCard telah disesuaikan dengan logika ternary operator untuk dapat memproses gambar, baik dari penyimpanan lokal (`/books/`) maupun langsung dari URL eksternal (`http/https`).

E. Pembuatan Categories, Testimonial, dan Footer Section

Melengkapi halaman dengan membagi kelompok genre buku (categoriessection.jsx), ulasan pembaca (testimonsection.jsx), serta informasi kontak dan tautan pada bagian bawah halaman (footers.jsx).

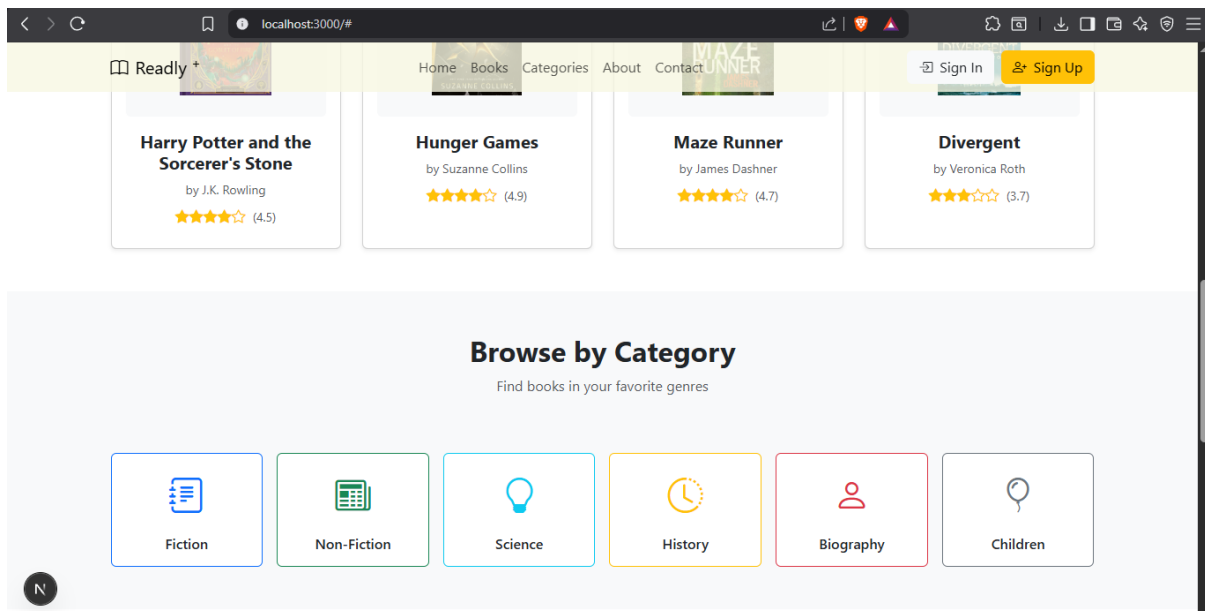

Categories

```
import React from "react";

export function CategoriesSection() {
  return (
    <section id="categories" className="py-5 bg-light">
      <div className="container">
        <div className="row mb-5">
          <div className="col">
            <h2 className="fw-bold text-center">Browse by Category:</h2>
            <p className="text-center text-muted">Find books in your favorite genres</p>
          </div>
        </div>
        <div className="row g-3">
          {genre_data.map((category, index) => (
            <div key={index} className="col-md-4 col-lg-2">
              <div className="card text-center border-${category.color} h-100">
                <div className="card-body">
                  <i>
                    <span className="bi ${category.icon} text-${category.color}" style={{ fontSize: "2.5rem" }}>
                    </i>
                    <h3 className="mt-3 mb-0">{category.name}</h3>
                  </div>
                </div>
              </div>
            </div>
          ))}
        </div>
      </div>
    </section>
  );
}

const genre_data = [
  { name: "Fiction", icon: "bi-journal-text", color: "primary" },
  { name: "Non-Fiction", icon: "bi-newspaper", color: "success" },
  { name: "Science", icon: "bi-lightbulb", color: "info" },
  { name: "History", icon: "bi-clock-history", color: "warning" },
  { name: "Biography", icon: "bi-person", color: "danger" },
  { name: "Children", icon: "bi-balloon", color: "secondary" },
];
```

Testimonial

F. Integrasi Komponen ke Single Page Layout

Semua komponen modular yang telah dibangun digabungkan menjadi satu kesatuan di dalam file induk `components/landing-pages/index.jsx`, yang kemudian diekspor ke rute utama aplikasi (`app/page.jsx`).
